How to use PDF workbooks

To complete a Qualsafe Awards PDF workbook on screen you **must download it** and open it in **Adobe Acrobat Reader**.

Failure to do this may result in **work being lost!**

If you do not have Adobe Acrobat Reader, [click this link](#) and follow the instructions to install the software.

You **must** make Acrobat Reader the default PDF reader when prompted during installation otherwise this may also compromise your work being saved correctly.

Once you are confident that the software is working correctly, it may be beneficial to test saving the document and practicing filling in the workbook before starting to answer the assessments.

To complete form fillable fields in a PDF using Adobe Acrobat Reader or Adobe Acrobat, follow these steps:

Using Adobe Acrobat Reader (Free Version)

1. Opening the PDF form:

- Launch Adobe Acrobat Reader on your device
- Open the PDF form you want to fill by clicking **File > Open** and selecting the PDF from your computer

2. Filling in the form fields:

- If the PDF is fillable, the form fields will appear as highlighted boxes or fields that you can type into
- Click inside a text field and start typing your information
- For checkboxes, click on the box or button to select it

3. Saving your work:

- After filling out the form, click **File > Save** or **Save As** to save the filled form on your computer
- You can also print the filled form if needed by clicking **File > Print**

Using Adobe Acrobat Pro (Paid Version)

1. Opening the PDF form:

- Open Adobe Acrobat Pro and load the PDF form by selecting **File > Open**

2. Filling in the form fields:

- Similar to the free version, click into text fields, dropdown menus, or checkboxes and fill them out
- Acrobat Pro also lets you sign and digitally validate forms if needed by clicking **Fill & Sign** from the Tools menu

3. Saving the completed form:

- After filling in all necessary fields, click **File > Save** or **Save As** to save your work
- You can also save a copy or print the completed form as required

Additional Tips

- **Digital signatures:** If the form requires a digital signature, you can use Adobe's Fill & Sign tool to add your signature
- **Form navigation:** Some fillable forms have "Next" and "Previous" buttons to help navigate between fields
- **Print option:** If you need a hard copy after filling the form, you can always print it directly from the program

Learner Workbook – Plagiarism Warning

This statement must be read and signed BEFORE completing the workbook.

Using the work of others (including Artificial Intelligence (AI)), as if it is your own is easily detected and **will** have consequences.

In the first instance your Trainer will be marking your work and can easily recognise if the submitted work does not 'match' the person they taught in the classroom. They have marked many of the same workbooks before and know what 'original' work looks like.

The Centre also applies its own internal quality assurance processes, which can identify inconsistencies, plagiarism and issues with the authenticity of submitted work.

Qualsafe Awards then carries out quality assurance checks, including the use of AI detection and plagiarism software. Qualsafe Awards External Quality Assurers are extremely well versed in identifying plagiarism.

The consequences of plagiarism:

The sanctions which may be imposed and the actions which may be taken include:

- Revocation of the qualification certificate
- Permanent ban from undertaking Qualsafe Awards qualifications
- Statutory notification of the incident to other regulated Awarding Organisations
- Notification to your employer
- Notification to professional registration organisations
- Recovery of legal costs

This may result in:

- Loss of employment
- Loss of earnings
- Loss of professional registration
- Inability to take regulated qualifications that are needed to maintain or progress your career

What is plagiarism and how can you avoid it?

Plagiarism is defined as the submission of someone else's work (including AI), either willingly or unwittingly, as your own work for your own personal gain.

A Learner will be deemed as having committed plagiarism if the submitted work:

- is copied from, or highly comparable to, another person's work;
- is directly taken from another academic source without appropriate references to that source being included; or
- if detection software returns a high probability of plagiarism or that AI has been used to generate answers.

You may paraphrase from resources or websites, but all sources **must** be detailed in your bibliography. Learner notes pages are included at the end of the workbook if you need more space for your answers.

If you are requalifying – you must NOT submit a direct copy of your previous work. Identical responses do not provide the necessary assurance that your knowledge is current. The best thing to do is write your answers from scratch – do not refer to your previous work.

I confirm that I have read and understand this information. I also confirm that the work which I have submitted is my own, genuine and current.

----------------------	----------------------	---------------------------	----------------------	--------------	----------------------

This Learner Workbook gives you the opportunity to contextualise your on course learning and further study to successfully pass the qualification assessment criteria. **To complete this workbook on screen you must download it and open it in Acrobat Reader**, failure to do this may result in work being lost. Alternatively, you can handwrite the answers in ink (not pencil). You have 3 attempts to submit your workbook for assessment to achieve a pass. Some Learner notes pages are included towards the end of the workbook for your notes or if you need more space for your answers.

Question 1. As a First Responder, you are called to a taxi rank by the taxi dispatcher. The taxi dispatcher had noted a man's arrival but had asked him to wait as he was busy on the phone at the time. He'd then forgotten about the man for around 15 minutes. When he remembered and went to check the waiting area, he found the man unresponsive and slumped over in a seat.

In no more than 500 words, rationalise why a <C>ABCDE method is used for primary patient assessment and briefly explain each element of the assessment in the context of this patient, including airway stepwise approach.

1.1. 1.2 Please provide your reference source:

Question 1 – Achievement Box					
Attempt	Date	Pass/Refer			Feedback/Action Plan
1		Pass ☐	Refer ☐		Yes ☐ No ☐
2		Pass ☐	Refer ☐		Yes ☐ No ☐
3		Pass ☐	Refer ☐		Yes ☐ No ☐

Question 2. You attend a scene where there are several casualties to deal with. Using both triage tools below, offer a classification and the associated interventions (within scope of practice) for each of them:

NHS Ten Second Triage tool (TST)

NHS Major Incident Triage Tool (MITT)

Casualty	Primary triage description upon initial arrival at scene:	Secondary triage description at Casualty Clearing Station:
	Casualty is disorientated and mobile, no life-threatening bleeding, clear airway, no penetrating torso injuries, breathing rate of 20 respirations per minute, heart rate of 89 beats per minute. TST classification: Interventions (within scope of practice) at this stage:	Casualty is mobile and complaining of a headache, blurred vision and has no memory of the events leading to the symptoms. Their breathing rate is 16 respirations per minute, heart rate of 66 beats per minute. MITT classification: Interventions (within scope of practice) at this stage:

Casualty is found lying on the pedestrian crossing, unable to walk, is in severe pain and shouting for help, no penetrating torso injuries, breathing rate of 22 respirations per minute, heart rate of 110 beats per minute.

Casualty is stretched to the Casualty Clearing Station (CCS) by First Responders as the casualty is showing clinical features indicating a spinal injury. Casualty is in extreme pain, they are alert and have no signs of head or chest injuries, breathing rate of 24 respirations per minute, heart rate of 130 beats per minute.

TST classification:

MITT classification:

Interventions (within scope of practice) at this stage:

Interventions (within scope of practice) at this stage:

Casualty is unresponsive, no severe bleeding, obvious head injury, noisy breathing with a breathing rate of 12 respirations per minute, no penetrating torso injuries, heart rate of 50 beats per minute.

Casualty is unresponsive, no severe bleeding, airway is maintained with an airway adjunct, casualty has a breathing rate of 12 per minute, heart rate of 55 beats per minute.

TST classification:

MITT classification:

Interventions (within scope of practice) at this stage:

Interventions (within scope of practice) at this stage:

Casualty is alert and mobile, bruising on forehead, no severe bleeding or penetrating torso injuries, breathing rate is 18 respirations per minute, heart rate is 90 beats per minute.

Casualty is alert and mobile, bruising on forehead, has vomited before arriving at the Casualty Clearing Station, no severe bleeding or penetrating torso injuries, breathing rate is 20 respirations per minute, heart rate is 95 beats per minute.

TST classification:

MITT classification:

Interventions (within scope of practice) at this stage:

Interventions (within scope of practice) at this stage:

Casualty is unresponsive, blood is coming from their mouth, no severe external bleeding, breathing rate is unobtainable, no penetrating torso injuries, heart rate is unobtainable.

Casualty is unresponsive, no catastrophic bleeding, not breathing, airway is maintained by an OPA after suctioning, CPR is being performed by First Responders who have moved the casualty to the Casualty Clearing Station.

TST classification:

MITT classification:

Interventions (within scope of practice) at this stage:

Interventions (within scope of practice) at this stage:

Casualty is responsive to painful stimuli, they are snoring, no life-threatening bleeding, pool of blood surrounding the back of their head, no penetrating torso injuries, breathing rate is 10 respirations per minute, heart rate is 45 beats per minute.

Casualty has been carried to the Casualty Clearing Station, they are unresponsive, airway is maintained by a head-tilt chin-lift, bleeding has stopped from the wound on the back of their head, extensive bruising has appeared across their chest, respiratory rate is 28 respirations per minute, heart rate is 125 beats per minute.

TST classification:

MITT classification:

Interventions (within scope of practice) at this stage:

Interventions (within scope of practice) at this stage:

Casualty is saying they have head pain and are unable to walk, there are multiple lacerations but no severe bleeding, no penetrating torso injuries, breathing rate of 30 respirations per minute, heart rate of 121 beats per minute.

Casualty is making incoherent sounds when spoken to, eyes opening spontaneously, multiple lacerations/wounds are uncovered including one on the forehead which is now surrounded by a bruise and swelling, there is no catastrophic bleeding, breathing rate of 24 respirations per minute, heart rate of 100 beats per minute.

TST classification:

MITT classification:

Interventions (within scope of practice) at this stage:

Interventions (within scope of practice) at this stage:

Question 2 – Achievement Box						
Attempt	Date	Pass/Refer			Feedback/Action Plan	
1		Pass	☐	Refer	☐	Yes ☐ No ☐
2		Pass	☐	Refer	☐	Yes ☐ No ☐
3		Pass	☐	Refer	☐	Yes ☐ No ☐

Question 3: Explain in no more than 200 words, how the heart's function is affected by:

- Arrhythmias
- Heart failure

3.2 Please provide your reference source:

Question 3 – Achievement Box					
Attempt	Date	Pass/Refer		Feedback/Action Plan	
1		Pass ☐	Refer ☐	Yes ☐	No ☐
2		Pass ☐	Refer ☐	Yes ☐	No ☐
3		Pass ☐	Refer ☐	Yes ☐	No ☐

Question 4: In no more than 500 words, explain the electrical conduction system of the heart, its components, and its relation to the cardiac cycle.

2.2 Please provide your reference source:

Question 4 – Achievement Box					
Attempt	Date	Pass/Refer		Feedback/Action Plan	
1		Pass	☐	Refer	☐
2		Pass	☐	Refer	☐
3		Pass	☐	Refer	☐

Question 5: Short answer question: Define the following terms: atheroma; arteriosclerosis; myocardial infarction and then explain their connection as part of the development of Coronary Artery Disease (CAD).

Term	Definition and causes
Arteriosclerosis	
Myocardial infarction	
Atheroma	

Connection to coronary artery disease:

3.1 Please provide your reference source:

Question 5 – Achievement Box						
Attempt	Date	Pass/Refer			Feedback/Action Plan	
1		Pass	☐	Refer	☐	Yes ☐ No ☐
2		Pass	☐	Refer	☐	Yes ☐ No ☐
3		Pass	☐	Refer	☐	Yes ☐ No ☐

Question 6. List the components of the heart on the diagram below:

2.1 Please provide your reference source:

Question 6 – Achievement Box				
Attempt	Date	Pass/Refer		Feedback/Action Plan
1		Pass ☐	Refer ☐	Yes ☐ No ☐
2		Pass ☐	Refer ☐	Yes ☐ No ☐
3		Pass ☐	Refer ☐	Yes ☐ No ☐

Question 7: In no more than 200 words explain what an ECG is and what it measures.

Continues on next page

*Question 7 continued.*

4.1 Please provide your reference source:

Question 7 – Achievement Box					
Attempt	Date	Pass/Refer		Feedback/Action Plan	
1		Pass ☐	Refer ☐	Yes ☐	No ☐
2		Pass ☐	Refer ☐	Yes ☐	No ☐
3		Pass ☐	Refer ☐	Yes ☐	No ☐

Question 8: You are dealing with an unconscious casualty following a collapse in the street. You are considering managing their airway as it has become 'noisy'. You decide to use a Supraglottic Airway Device (SAD). List five indications or problems in relation to its use.

Indications or problems
1.
2.
3.
4.
5.

5.1 Please provide your reference source:

Question 8 – Achievement Box					
Attempt	Date	Pass/Refer		Feedback/Action Plan	
1		Pass ☐	Refer ☐	Yes ☐	No ☐
2		Pass ☐	Refer ☐	Yes ☐	No ☐
3		Pass ☐	Refer ☐	Yes ☐	No ☐

**Question 9: In relation to managing a patient using medical gases, complete the table below:**

Patient	Which medical gas?	Administration method/ dosage	Caution(s)/ contraindication(s) (where applicable)
Pregnant, having regular contractions, pain score of 9			
Exacerbation of COPD, oxygen saturations of 87%, difficulty breathing, respiratory rate is 32 breaths/min			
Heavy PV bleed, oxygen saturations of 90%			
Ankle injury following a rugby game, pain score of 8			
Cardiac arrest, oxygen saturations of 61%			

List the health and safety principles for medical gases:

6.1; 6.2; 6.3 Please provide your reference source:

Question 9 – Achievement Box						
Attempt	Date	Pass/Refer			Feedback/Action Plan	
1		Pass	☐	Refer	☐	Yes ☐ No ☐
2		Pass	☐	Refer	☐	Yes ☐ No ☐
3		Pass	☐	Refer	☐	Yes ☐ No ☐
